

1403 Belt and Chain Calculator

This calculator is meant to be used as a resource to give you the # of links or the Center to Center distance of roller chain in its natural state. It also calculates the # of teeth a belt requires given two pulleys and a distance between them.

It **does not** account for wear and tear, manufacturing tolerance issues, or chain/belt stretch over time.

Legend:

Dropdown menus, choose from a list

Text input, type in the value
